## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-9, 23, 31-33 in part, drawn to SEQ IS NO:2 protein and fragments, fusion proteins, kit, classified in class 530, subclass 300.
- II. Claims 10-22, and 31-33 in part, drawn to nucleic acids of SEQ ID NO:4 encoding SEQ ID NO:2 protein, or fragments, homologous nucleic acid, vector, host cells, kit, classified in class 536, subclass 23.1.
- III. Claims 24, and 31-33 in part, drawn to antibody, kit, classified in class 530, subclass 387.1.
- IV. Claim 25, drawn to method of screening compound using the protein of group I above, classified in class 435, subclass 4.
- V. Claim 26, drawn to modulator, unclassifiable due to unknown structure of the modulator.
- VI. Claims 27 and 28, drawn to method of treating unspecified disease caused by overexpression of fhRpr using unidentified compound, unclassifiable due to unknown nature of the compound used in the method.
- VII. Claims 29 and 30, drawn to method of treating cancer with yet unidentified compound, unclassifiable due to unknown nature of the compound used in the method.

The inventions are distinct, each from the other because of the following reasons:

Inventions I-III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are human proteins, or nucleic acids encoding the proteins, or antibody specifically binding the proteins. The different inventions have different molecular structures and different biological properties.

Inventions groups IV-VII are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are materially distinct methods which differ at least in objectives, method steps, reagents and/or dosages and/or schedules used, response variables, method of detections, and criteria for success.

Inventions I and IV are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the product as claimed can be used in a materially different process such as making antibody.

These inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification. The search required for each of the above inventions is not coextensive with regard to the literature and the sequence searches. Further, a reference which would anticipate the invention of any one group would not necessarily anticipate or make obvious the any of the other groups. For these reasons, restriction for examination purposes is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
